

Park The Fork Truck For This Job

The alternative for quick ergonomic portable lifting

Application

Facilitate better safer ergonomics and reduce expensive fork truck use.

Problem

When moving material only a short distance, it is not efficient, safe or sometimes practical to use a fork truck.

Solution

The Herkules Portable Lift Cart - The ideal solution that will eliminate the need for a fork truck for close proximity material movement. With the lift table mounted to a portable cart, the operator can position the load at an ergonomic height and then move it out of the way when fully loaded or depleted. 100% air operation requires only an air line to be connected via a quick disconnect at the handle. Simply plug in the air line and begin up/down operation while a foot brake keeps the lift stationary.
